Visual Inspection

Detected Defects

- Crack | conf 0.86 | risk: Critical | size: 99.3%

AI Maintenance Assistant Report

****Inspection Report for Screenshot_27-6-2026_02229****

****Findings:****

- A significant crack has been detected in the inspected component, covering approximately 99.3% of the image area. The detection confidence is high at 86%.

****Maintenance Recommendations:****

- Immediate inspection by a qualified aircraft maintenance engineer is required to assess the severity and implications of the crack. Given the critical risk tag, this defect poses a serious concern for structural integrity.

****Preventive Actions:****

- Implement regular inspections of the affected area to monitor for any further deterioration or new defects.
- Review maintenance protocols to ensure that similar issues are identified earlier in future inspections.

****Note:****

- The risk tag is a heuristic estimate and does not constitute a certified airworthiness determination. A thorough human inspection is necessary to confirm the findings and determine the appropriate course of action.
